Transferring Knowledge to the New Style of Learning: Extending the Classroom Beyond the Four Walls

NETWORKS

NetWorks Webinar Presenter

Karl M. Kapp, Ed.D., is a professor of Instructional Technology at Bloomsburg University in Bloomsburg, PA. His Doctorate of Education in Instructional Design is from University of Pittsburgh. Most recently, he is author of *Gadgets, Games and Gizmos for Learning: Tools for Transferring Know-How from the Boomers to the Gamers* published by Pfeiffer. Visit the book's website at www.gadgetsgamesandgizmos.com or visit his blog at www.karlkapp.blogspot.com

NETWORKS

Question

How much do you know
about Web 2.0 Tools?

- A – Please define Web 2.0 and what you mean? Not familiar with it.
- B – I know all about this stuff just tell me how to use it in the classroom.
- C – I want to know how to set up a blog, wiki and/or podcast.

NETWORKS

A blog is an easy-to-use web page that provides a chance to quickly add information and for readers to quickly respond.

Blog Book Tour: Week Three

Here is the line up for Week 3 of the Blog Book Tour for *Gadgets, Games and Gizmos for Learning*. If the first two weeks are any indication, this week will prove to be great with interesting and thought provoking posts, ideas and maybe even some controversy.

Check out the line up (And as an extra bonus, [Tom Haskin](#) has joined the tour with a review of the book. His posting on Wednesday is sure to be thoughtful, insightful and intriguing. I am really glad he joined the tour and thrilled to have his input about the book.)

So here is Week Three's line up:

Day Eleven: 09/24/07 - Ben Hamilton's [Learning Design and Performance Improvement](#)

About Me

Name:
Karl Kapp
Location:
Bloomsburg,
Pennsylvania, United
States

Karl is a consultant, speaker, scholar, and expert on the convergence of learning, technology and business operations. His background teaching e-learning classes, knowledge of adult learning theory, and experience training CEOs and front line staff provides him with a unique perspective on organizational learning. He was recently voted as one of TrainingIndustry.com's 2007 Top 20 Most Influential Training

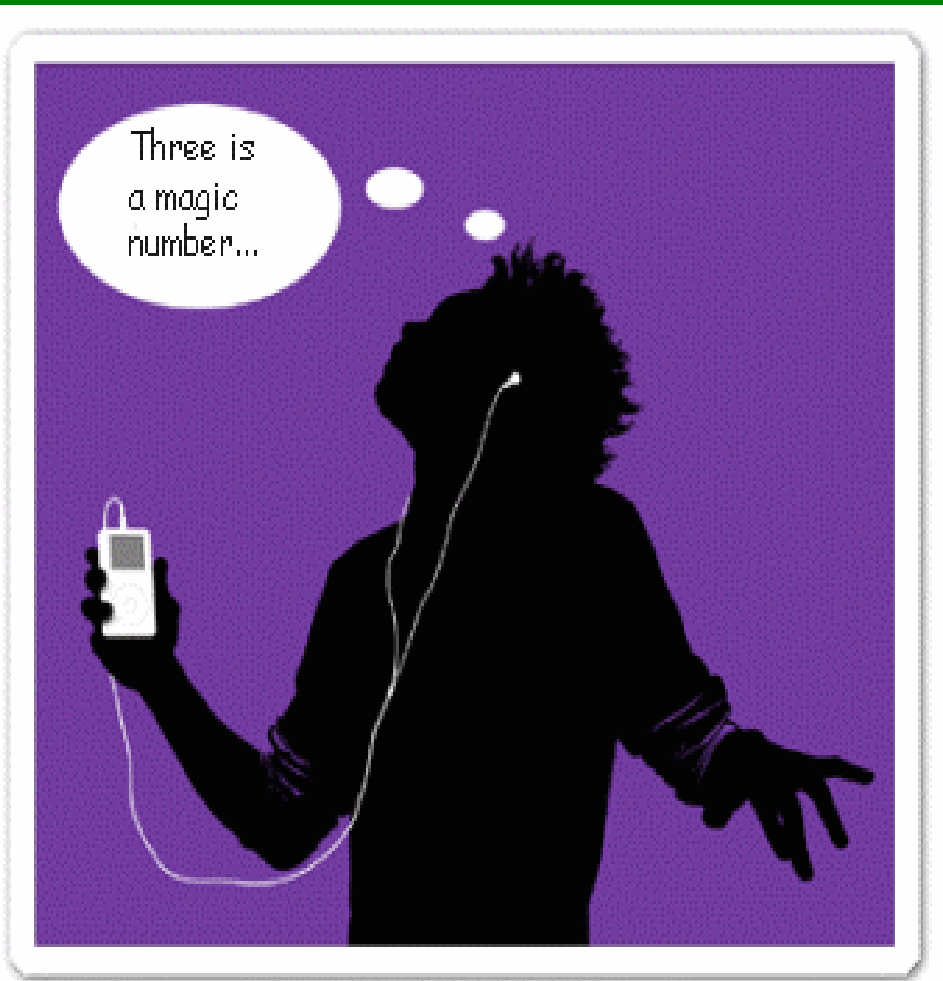

**Wiki means Quick

Past Events

- Dr. Kapp is taught a course this summer using two metaverse environments. One was Second Life and the other was ProtonMedia's 3D space known as the Protosphere. It was an exciting online class. For a complete description of the course, go to Course Description. A few semester's ago, the Managing Multimedia class's RFP dealt with putting educational elements in a 3D environment. You can find the RFP and the bidders questions on the RFP Materials page.

Machinima Tips

Alright, here is a list of the software you can use to create machinima. (you can use any that you want, this is just an example)

- Second Life
- SnagIT
- Adobe Photoshop
- Windows Movie Maker
- WinAVI
- If you don't want to read your script while you are creating your video I recommend using Adobe Audition.

... that I changed the Second Life window size to second smallest by going to File -> Set Window Size -> ...

This provides an appropriate window size for a video to be uploaded to youtube without losing quality.

WRITE A SCRIPT. Do not try to go through it impromptu. It is definitely not a good idea.

I then loaded up SnagIT and used the record feature to capture my video and record my dialog.

For freeze frame captures I used Photoshop to edit the pictures appropriately so I saw what I wanted to see. I then used Snag IT again, selected my picture and recorded my narration over that.

I then used a mixture of Window Movie Maker and winavi to link the avis together that SnagIT created. I did this mainly because Movie Maker has a bug that causes it to crash after you add more than 7 clips.

After I added everything into Windows Movie Maker I saved it and converted it into a .wmv. (There are several other programs out there.) The demo version of WinAVI will put a watermark on your video.

Machinimia Project

The Machinimia project is designed to enable you to become familiar with the recording function of SL and to show how SL can be used to create an educational piece using the avatars as actors.

Total Chaos: First Second Life ID Class...Total Fun

Tonight was the first "Learning in 3D Class" it was totally fun and totally chaotic. It reminded me a lot of the first e-learning classes that I taught, no one was really sure what to do, the software would crash from time-to-time and students and instructors were figuring out what needed to be done.

About Me

Karl Kapp

Karl is a consultant, speaker, scholar, and expert on the convergence of learning, technology and business operations. His background teaching e-learning classes, knowledge of adult learning theory, and experience training CEOs and front line staff provides him with a unique perspective on organizational

Kurt Paccio said...

Karl,

We're following the Second Life class with anticipation. Please don't allow the students to give up. The possibilities are SO HUGE once the wrinkles are ironed out.

I would like to request that the videos be cross-posted on TeacherTube as well as YouTube. Many of your education track students will STILL find that YouTube is filtered out at school.

Thanks for keeping the blogosphere posted on your progress.

KP - '99

Steve Major said...

So far, I feel that the class is going very well, albeit for some technical difficulties. Since class, I have been able to log on to Protosphere, so I'm really looking forward to getting into that interface (maybe?) this week. It seems to be a cleaner, more educationally-oriented environment, so I'd really like to see how the avatars can interact there, compared to Second Life. One of the biggest problems I'm having in Second Life is filtering out all of the unnecessary chatter, gestures, and sounds and trying to focus on what's actually being discussed. It's frustrating at times, but I'm sure it will get better as the course progresses!

work. The excellent videos they have created have been viewed hundreds of times, the work they have done has been tracked by the blogosphere and individuals outside of the class have given feedback and input to the students and the class(in fact the idea to place content on TeacherTube was from a blog comment by [Kurt Paccio](#). Thanks Kurt, great suggestion)

People like [Alan Levine](#) from [CogDogBlog](#) commented on the student work.

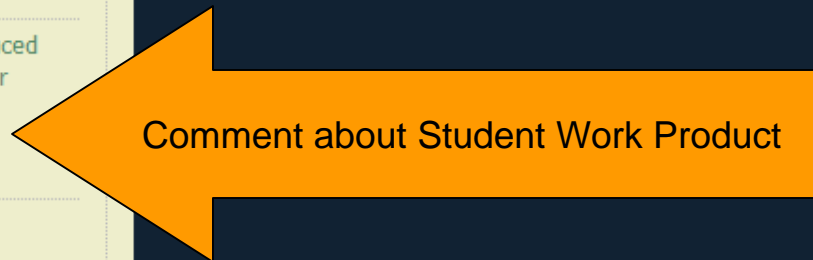

Let me add another note of congrats for an excellently produced intro to SL video. It even speaks more to the power of a user generated world that this was a student created production. We've added it to our NMC Video Jukebox at <http://nmc.vodpod.com>

And people like [Cole Campese](#)...who blogs at [Learning and Innovation](#)...an alumni of the program who commented on the student's work. And Bart Pursel another alumni who blogs at [Virtual Learning Worlds](#) presented to the class in Second Life highlighting the work he has done in-world. And Hilary Mason, Assistant Professor, New Media/Computer Science [Johnson & Wales University](#) in RI contributed to the class by giving us a tour of virtual Morocco. She blogs at [3greeneggs](#).

The educational implications are staggering.

The 4 walls of a classroom and the virtual 4 walls of educational learning management systems (where only those with a password can get in and view the intellectual contributions of the students) have been shattered. We need to rebel against the confinement of a contained course. Shatter the LMS walls with Web 2.0.

The student's work will live well past the class, it will be shared by hundreds if not thousands a people...well beyond the 34 who are
