

California Energy Usage - Worksheet

Name _____ Period _____

Objective: Allow students to understand the usage of Energy for California. Students will research the different types of Energy used in California. They will identify the sources, impact on the environment and future prospects.

What are largest producers of energy in California?

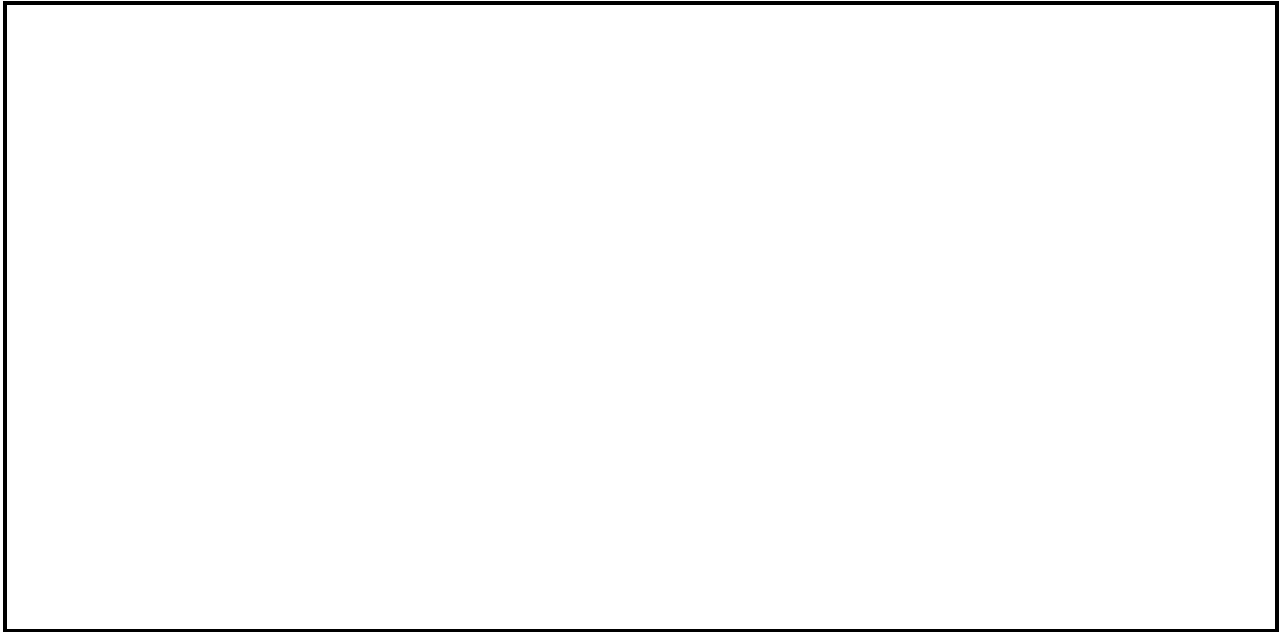

How have changes in population affected energy production and consumption?

What is the projected source for energy production in California?

Locate Source of Energy Production

Draw an energy producer or transmission method.

Conclusion What can you project about future energy production and consumption in the state of California? Does California have adequate supply of energy available for its future population (assume a ten year period) ?
