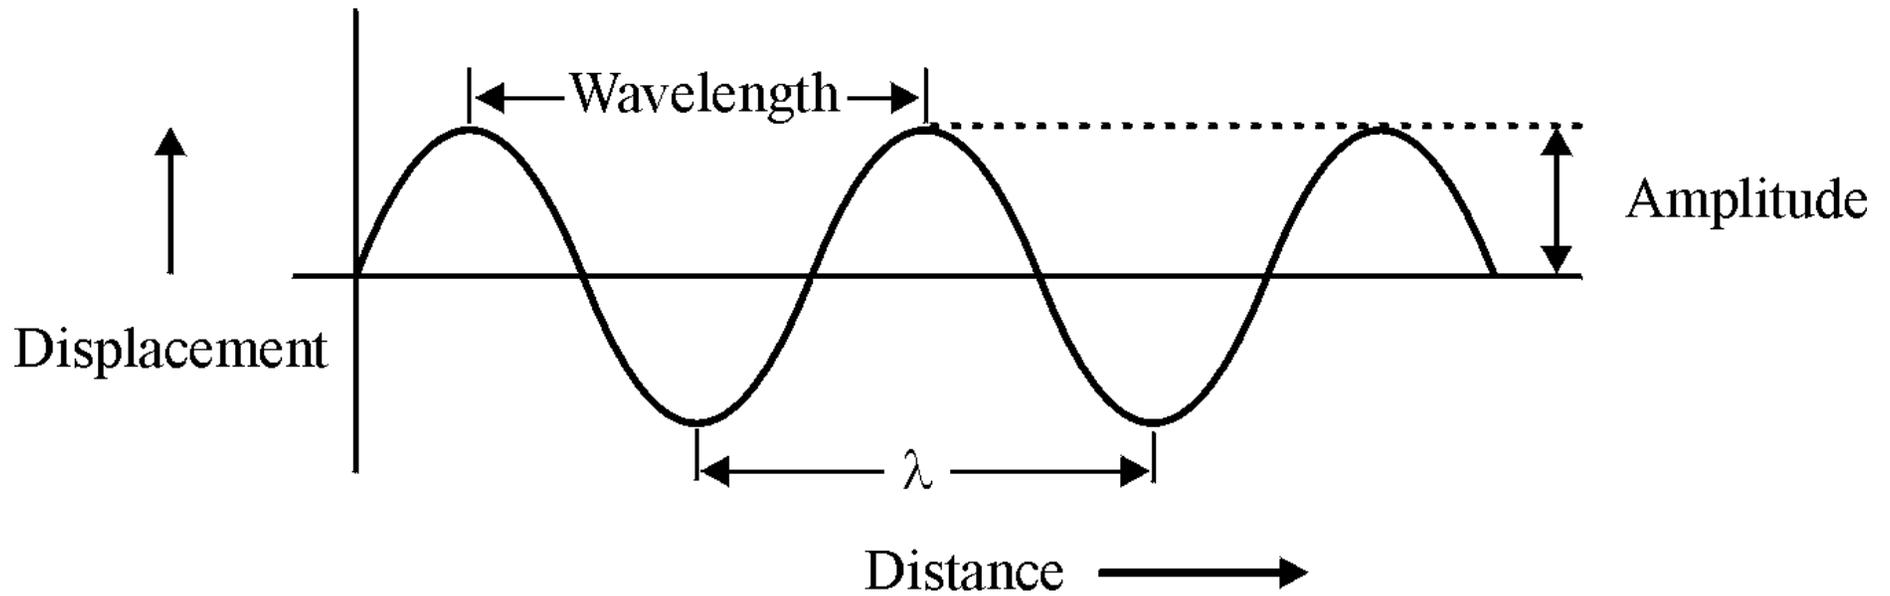

Figure 1-1 *Displacement versus distance along a wave at an instant of time*

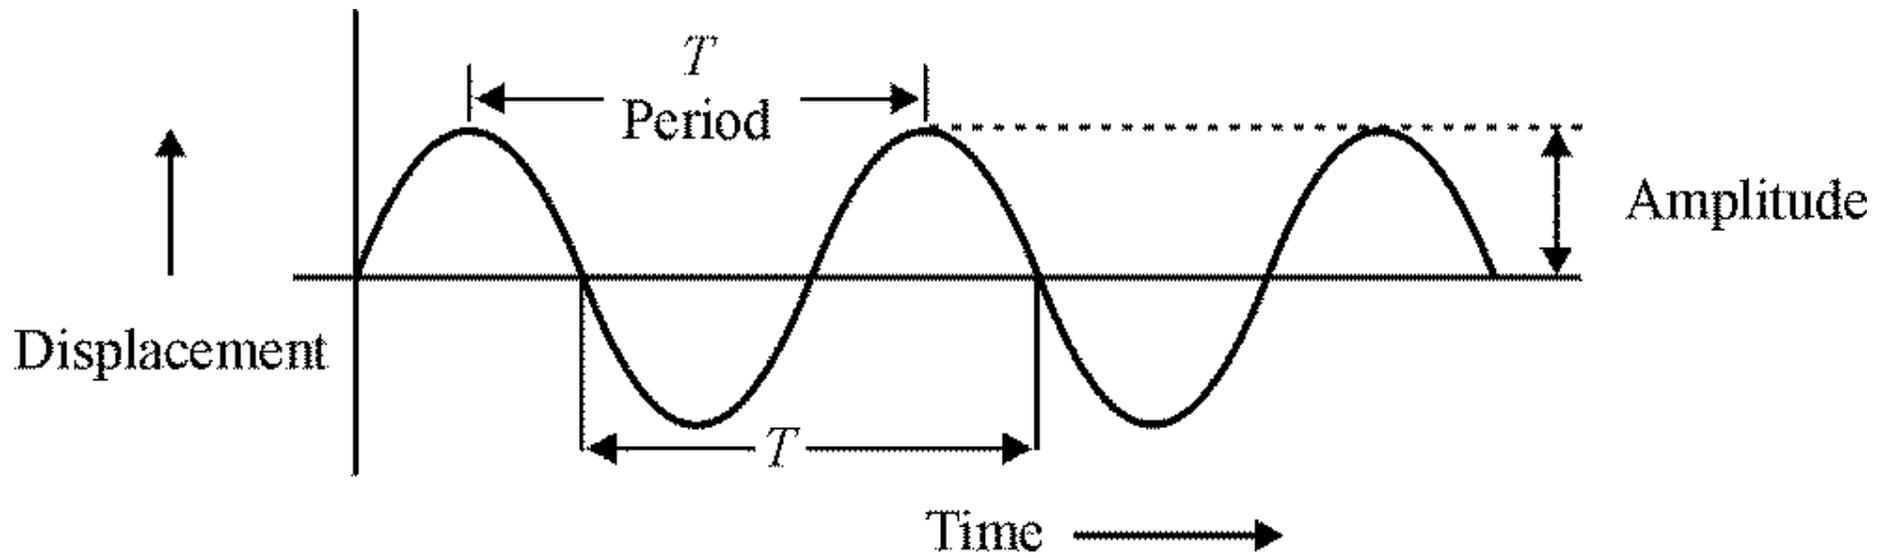

Figure 1-2 *Displacement versus time at one position along the wave*

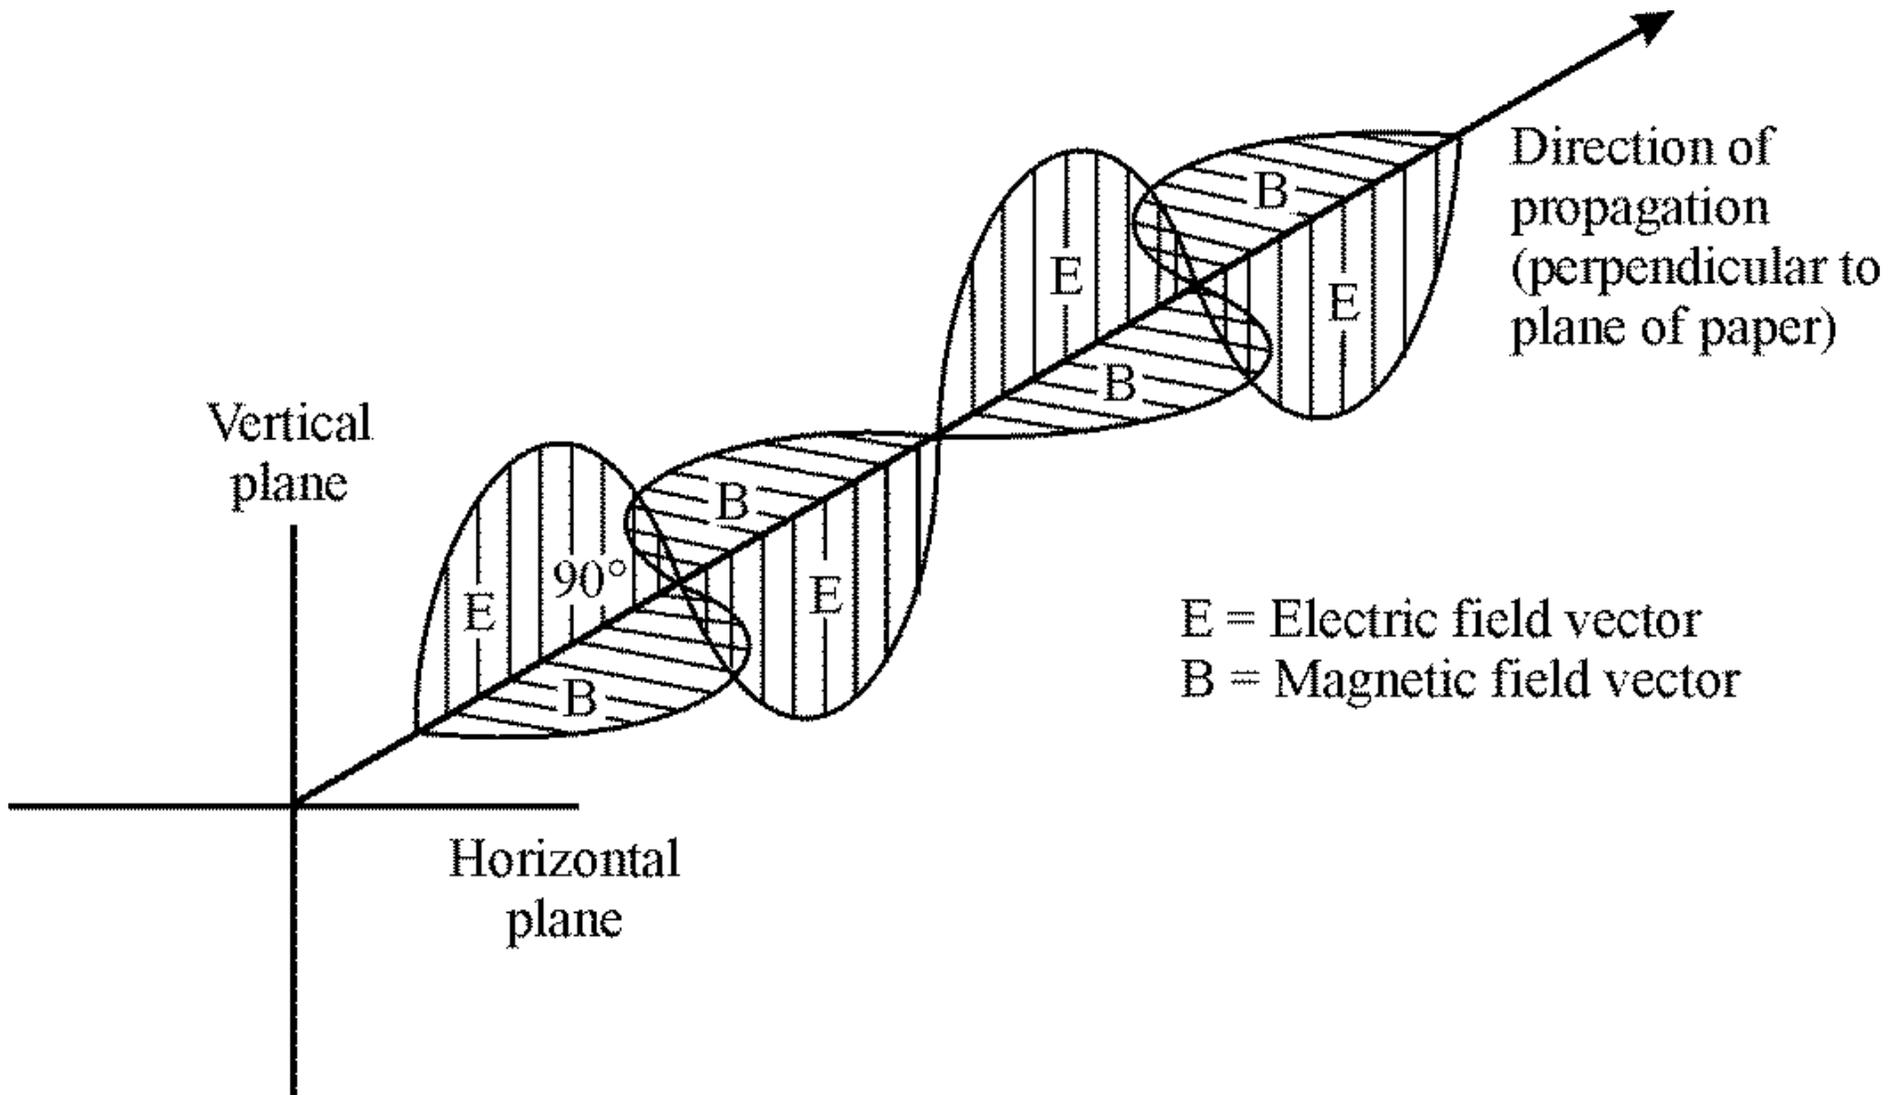

Figure 1-3 *Three-dimensional model of an electromagnetic wave*

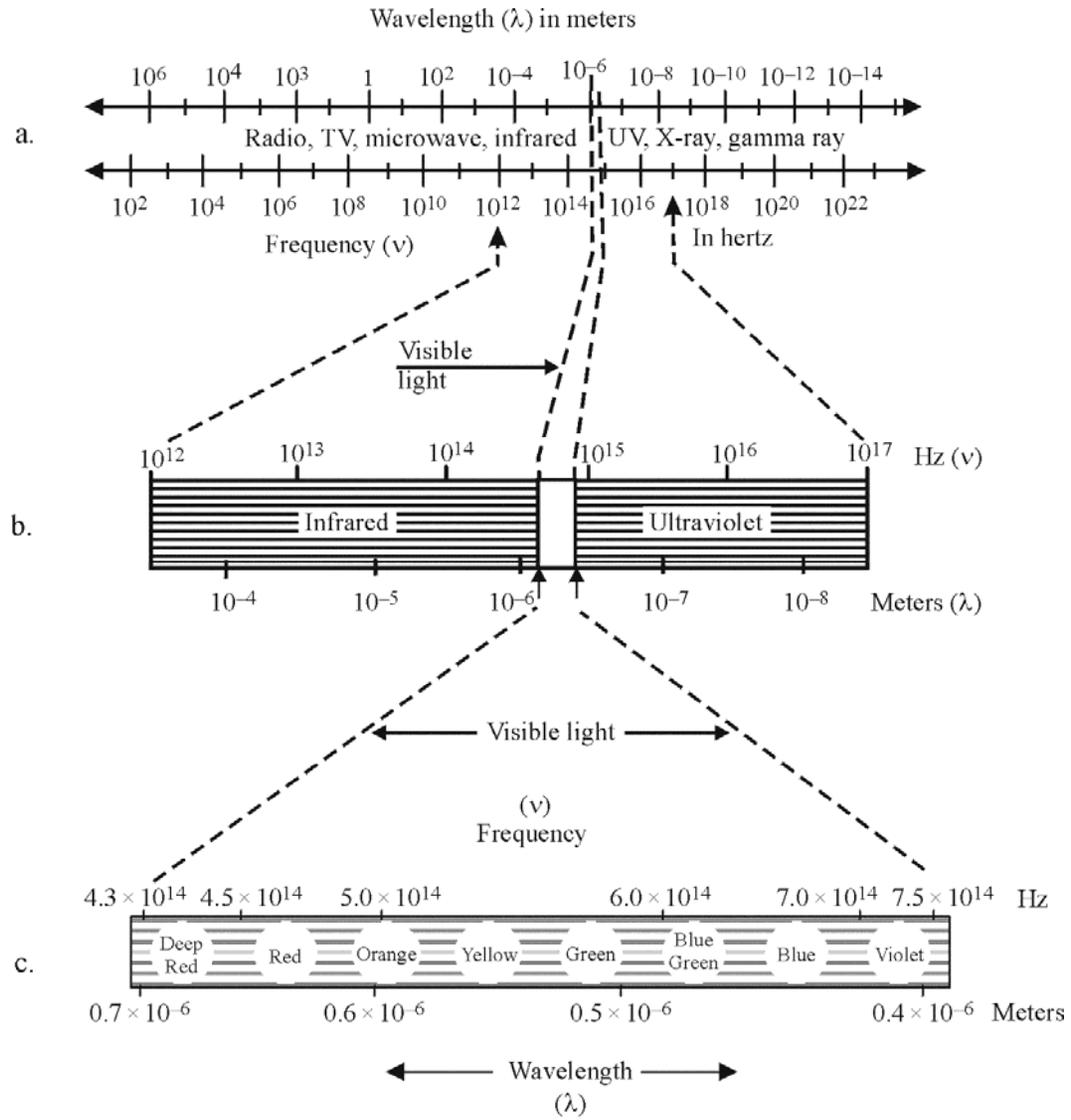

Figure 1-4 *The electromagnetic spectrum and its principal regions*

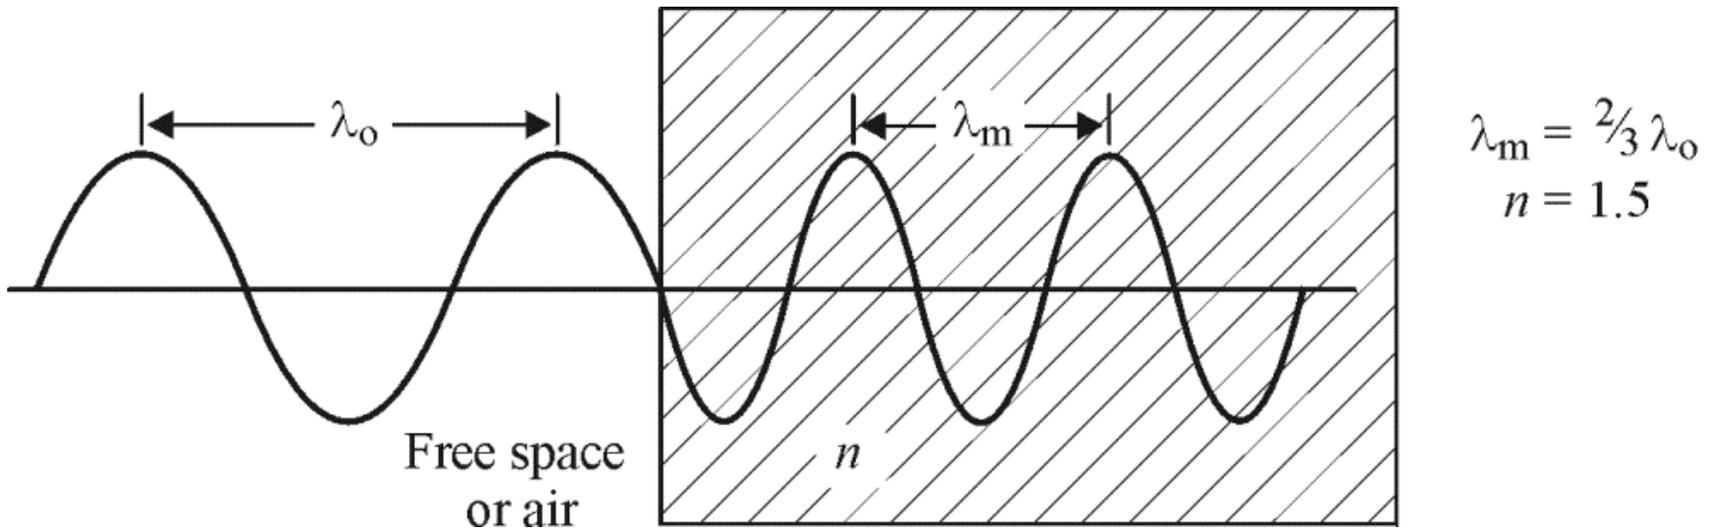

Figure 1-5 *Wavelength reduction of light passing through a material of refractive index n*

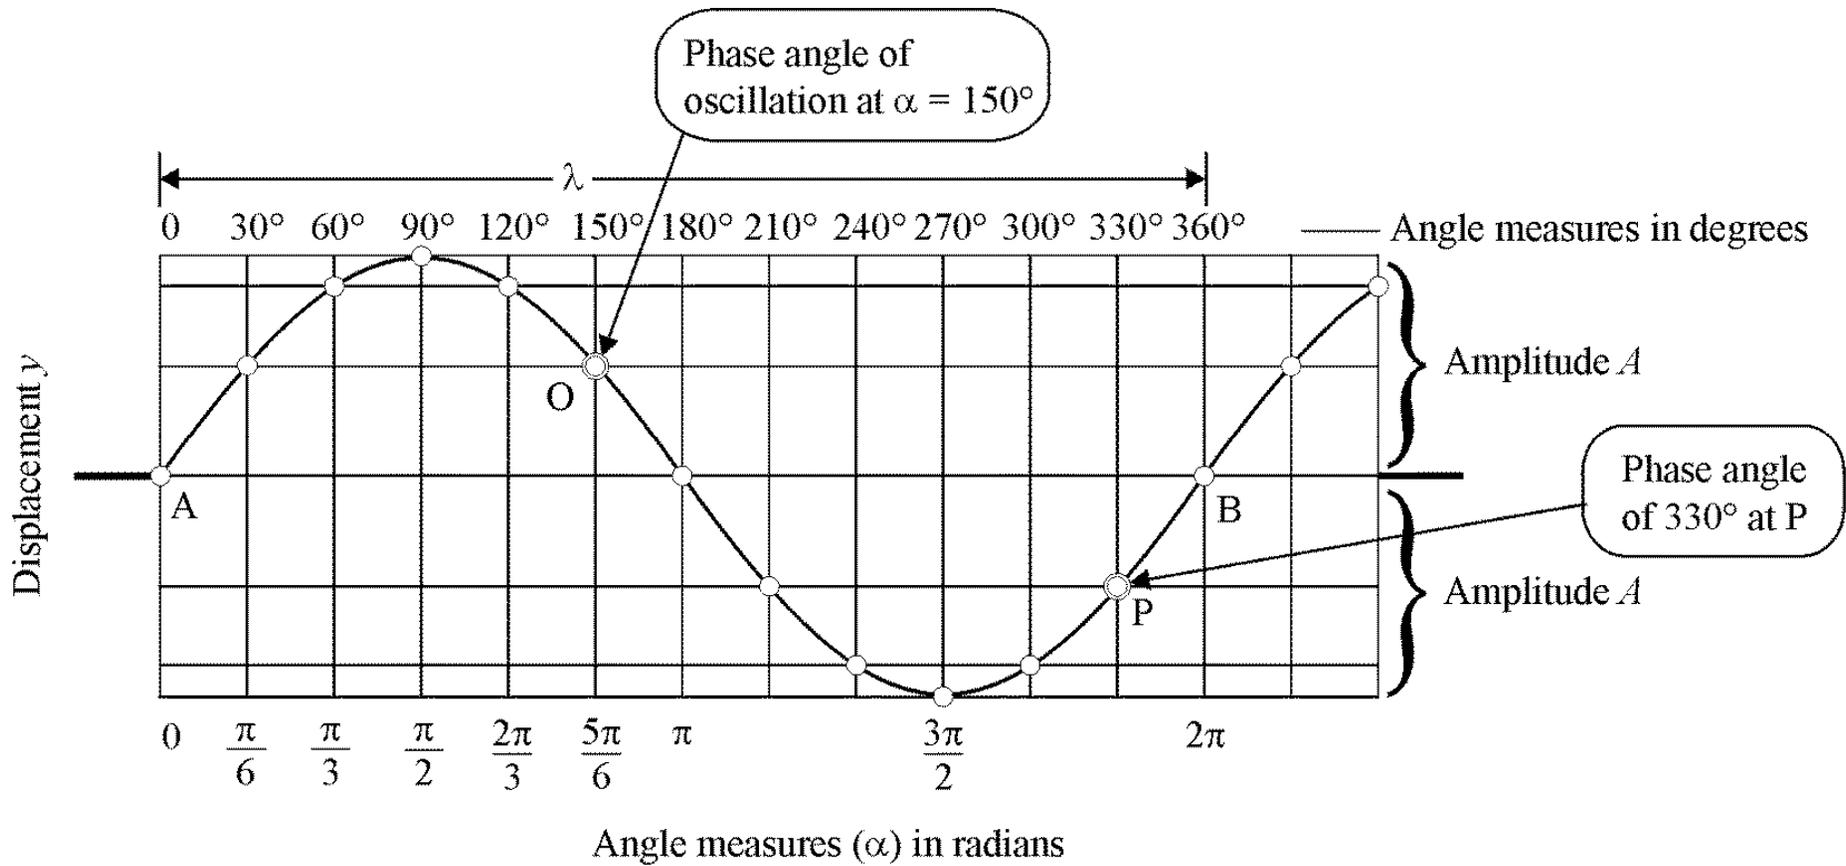

Figure 1-6 *Sine wave representation*

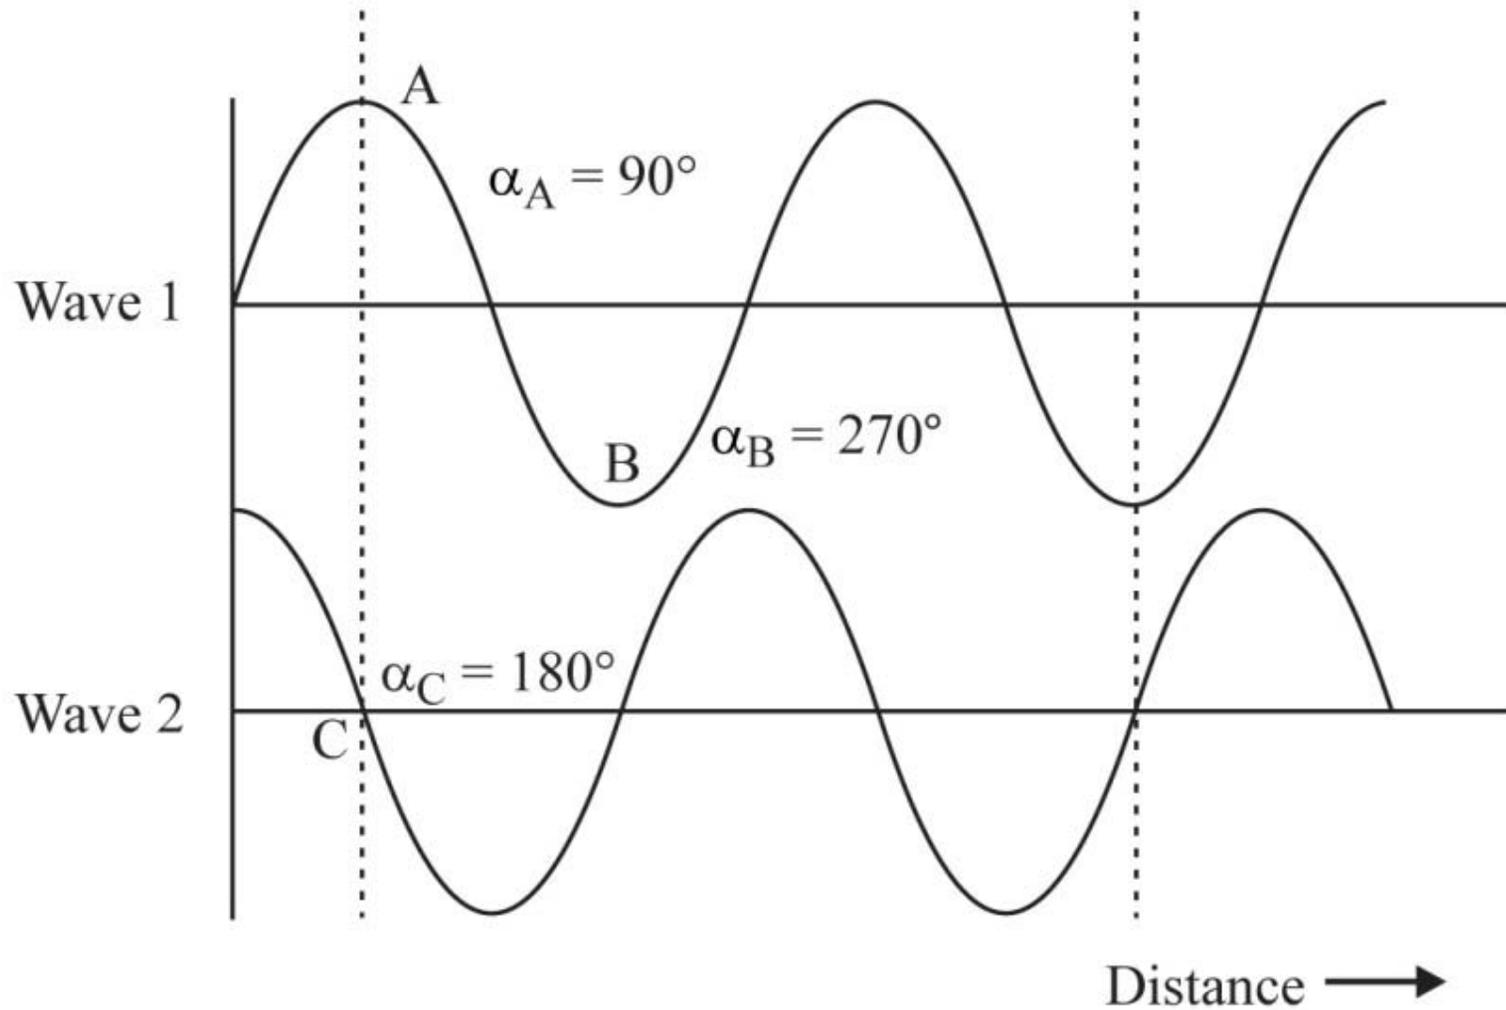

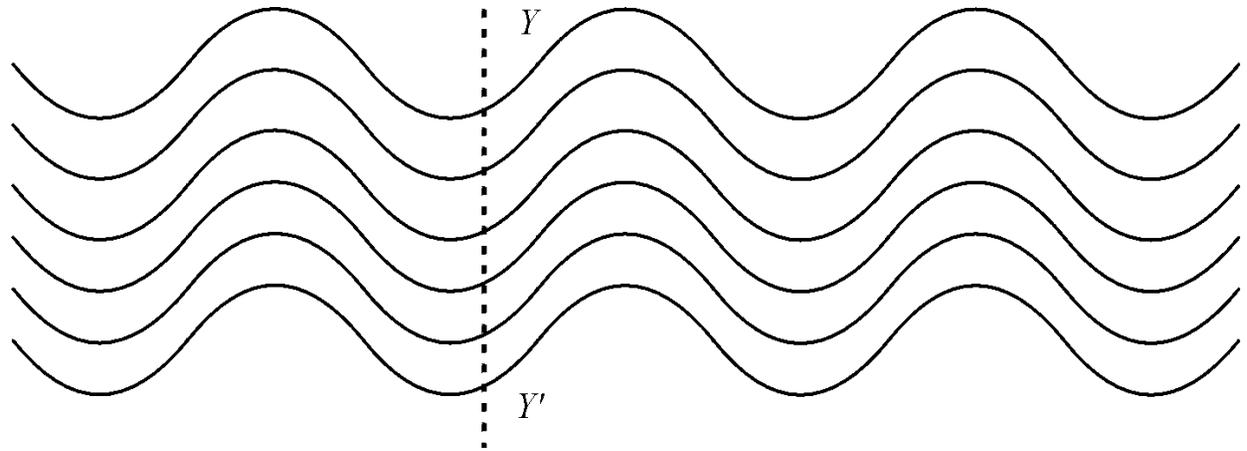

Figure 1-7 *Phase difference between several points on two sine waves*

(a) *Coherent light.* Each of the five waves has the **same** phase angle along the vertical line YY' , and all have the **same** wavelength.

(b) *Incoherent light.* Each of the four curves has a **different** wavelength and their phases are **different** along any vertical line YY' .

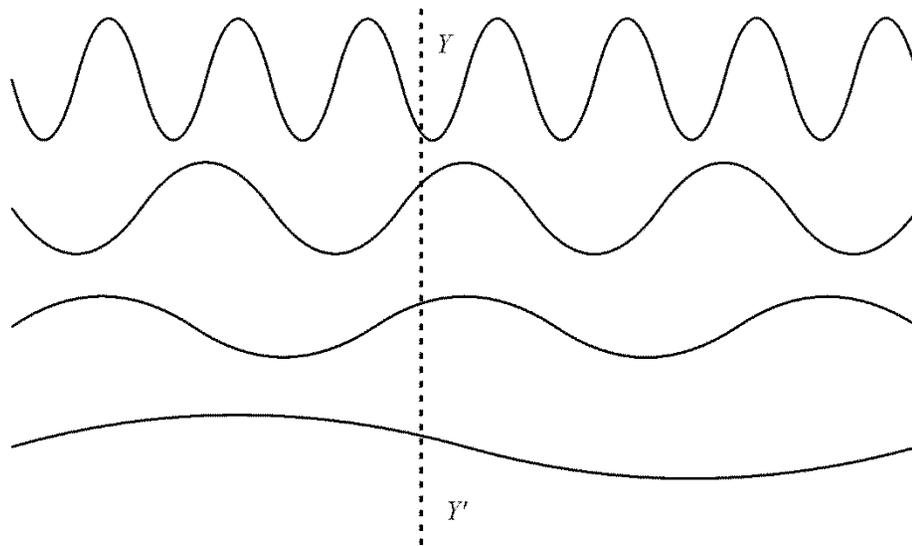

Figure 1-8 *Comparing coherent and incoherent light*

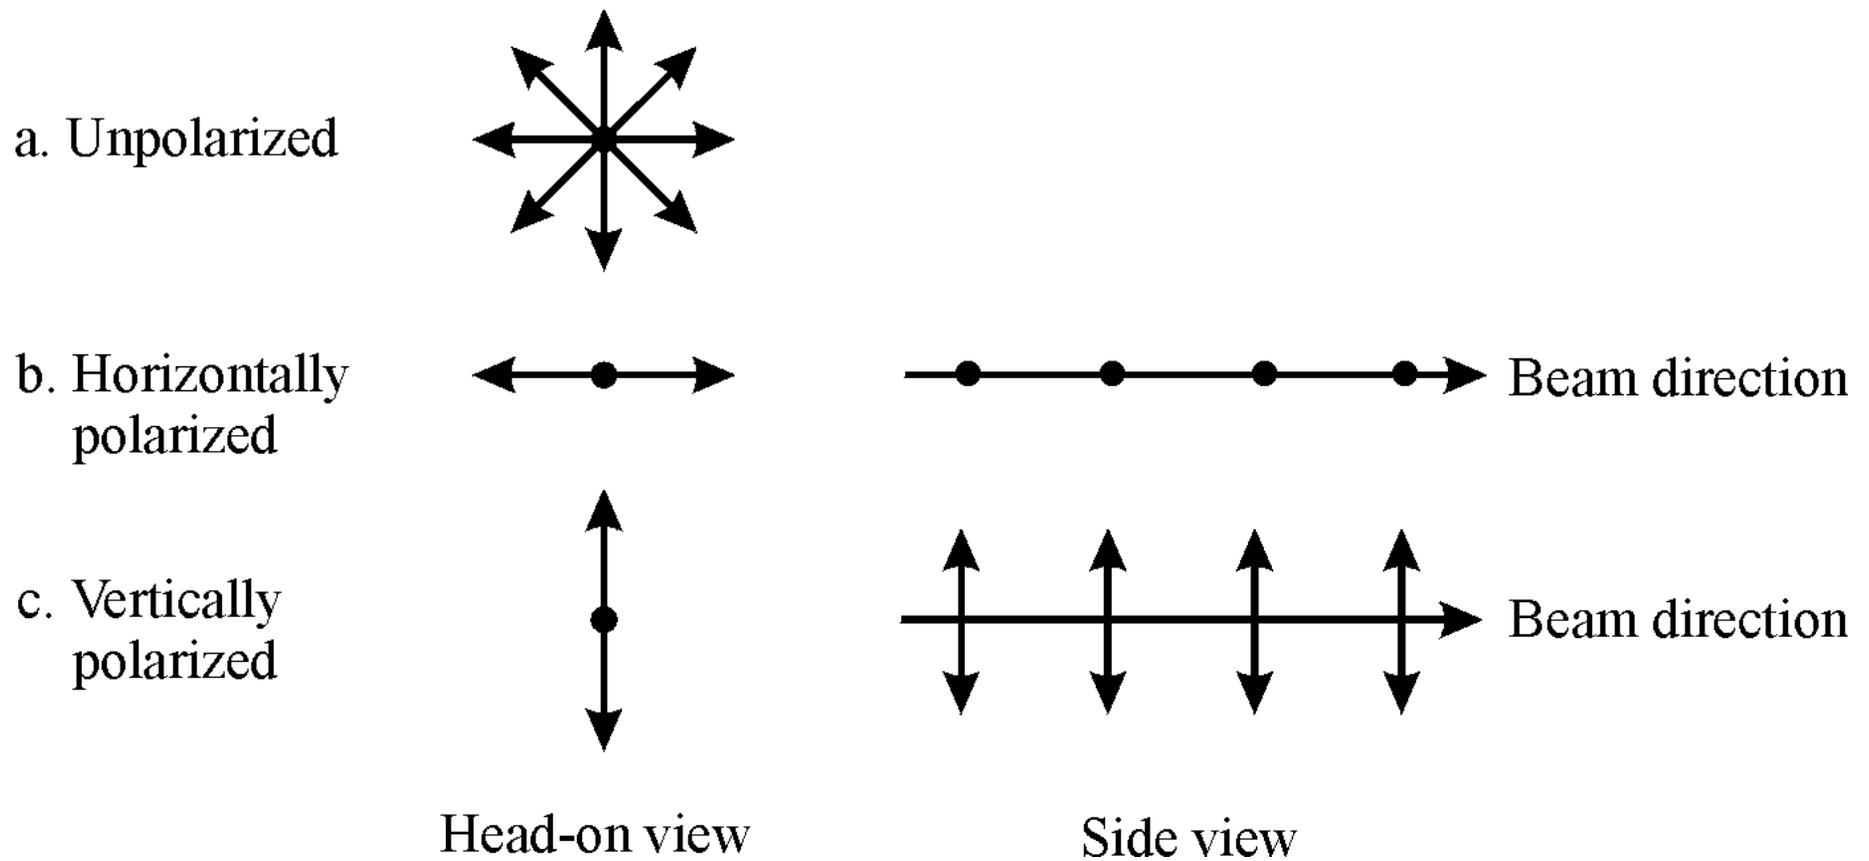

Figure 1-9 *Representation of polarized light*

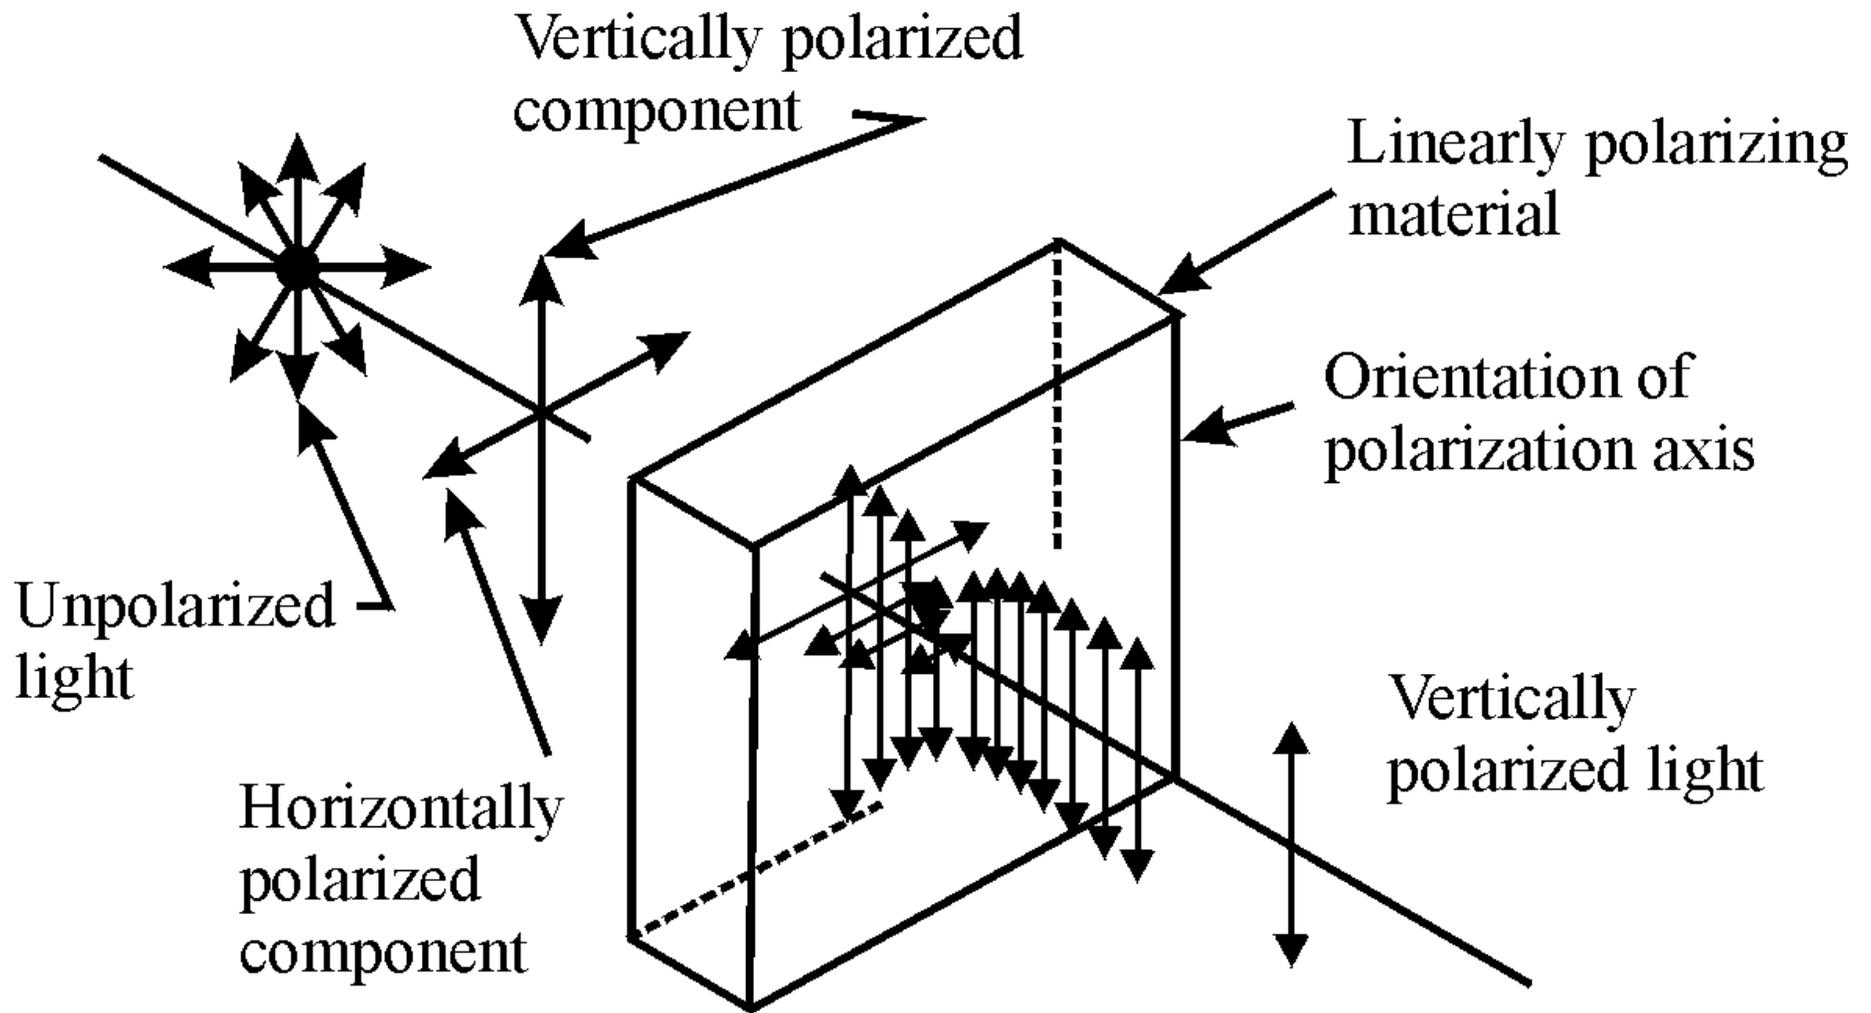

Figure 1-10 *Polarization by absorption*

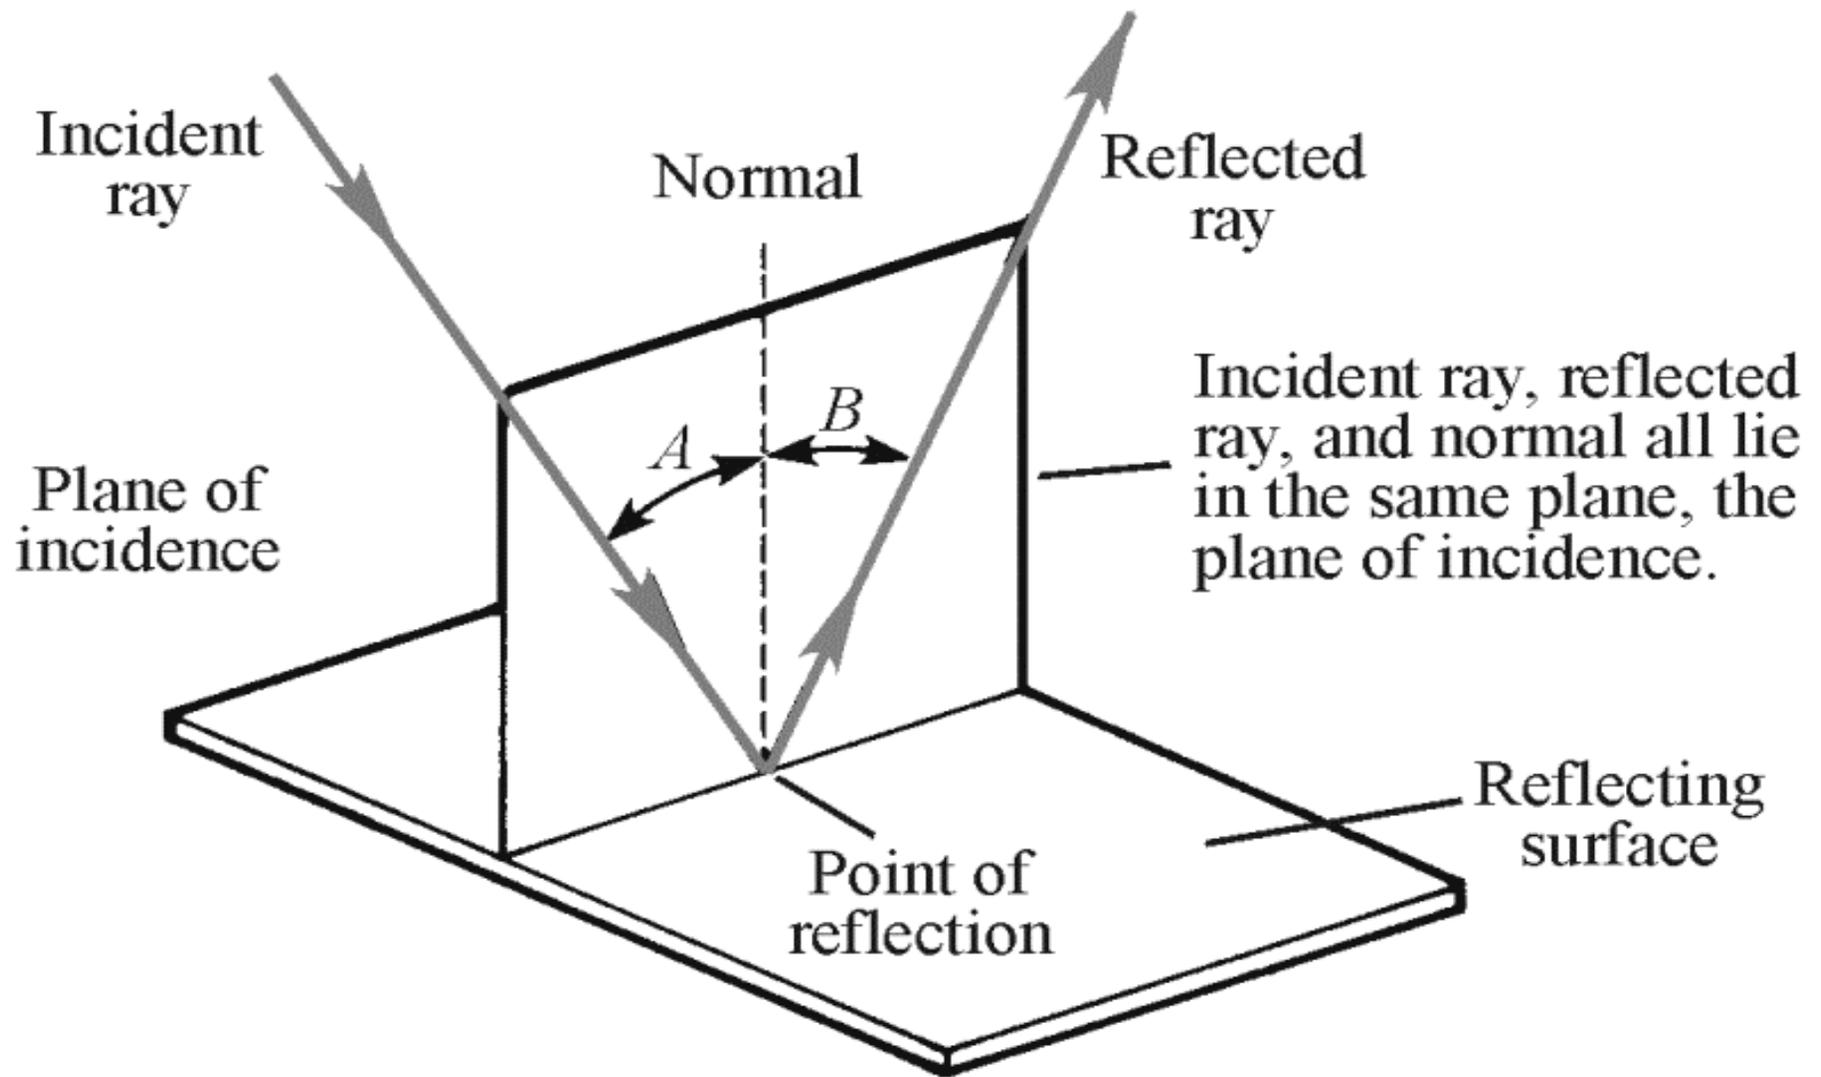

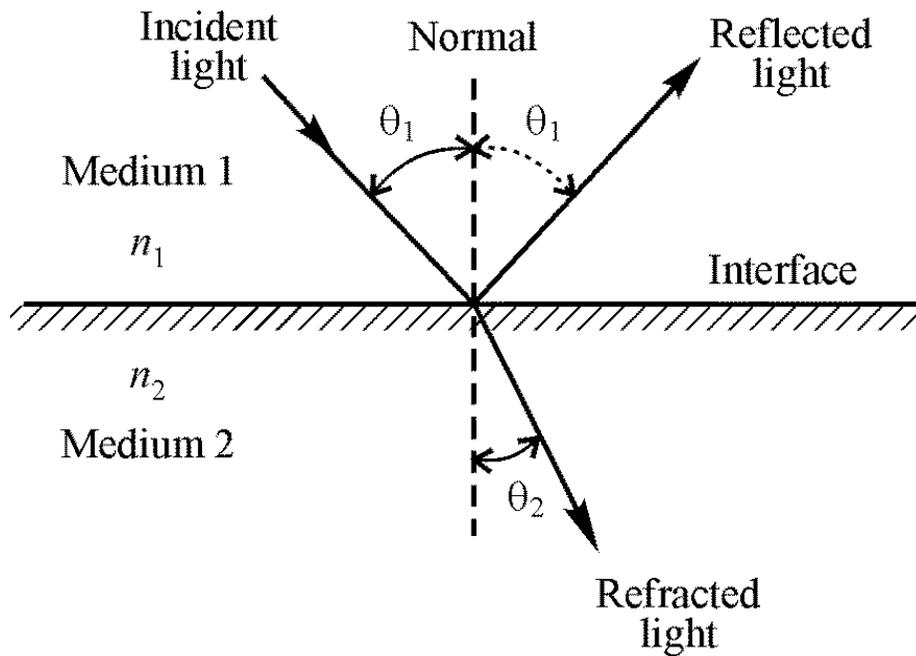

Figure 1-11 *Law of reflection: Angle B equals angle A.*

Snell's law

$$n_1 \sin \theta_1 = n_2 \sin \theta_2 \quad (1-13)$$

where

n_1 = index of refraction of medium 1

n_2 = index of refraction of medium 2

θ_1 = angle of incidence (and reflection)

θ_2 = angle of refraction
